

CATCHING SMALL PRAWNS

Hai, friends, normally we use special net or “Penyiut” as we called it in Brunei to catch small prawns called “Bangkutut, but today we are introducing a new and different type of catching these little prawns, which is by using plastic bottles.

At the top of this plastic bottles is cut slightly and we put in baits inside to attract this little prawns inside the bottle.

While waiting for the little prawns or “Bangkutut” by using the improvised apparatus which is the used plastic bottles, at the same time also catching them by using the old prawn net or “penyiut” .

A good thing about this new apparatus is that we can catch these little prawns “Bangkutut” along the river and small streams nearby.
